

MESSAGING BASED PROXY APPLICATION MANAGEMENT

ABSTRACT OF THE DISCLOSURE

Sending network device instructions to a network device and receiving the instructions has been described. Sending the instructions includes receiving an application instruction generated by an application; uploading proxy agent instructions derived from the application instructions to a mail server; and confirming that the proxy agent instructions have been downloaded by a proxy agent. Receiving the instructions includes downloading a message from a mail server, the message including the network device instructions; authenticating the message; and parsing the instructions.
